

## BORDLEY TOWNSHIP PROJECT

### WHAT WE DID TODAY

4<sup>TH</sup> September 2013  
Field surveying Lainger  
Field Q

Today four members of BTP were out in Lainger Field Q surveying the features (platforms) exposed during the dry summer within the sub-circular enclosure.

Above: Footings of a wall

Above right: Enclosure banks and modern section of wall which dissects the enclosure

Right: Surveying of a small enclosure east of modern wall showing features to west (which were surveyed on the 4/9/13) and banking to the north

The plan is to return over the next month and complete the survey of this large field before moving on to the settlements and enclosures in the north of the township above Mastiles Lane.

Above: Pauline and Bob measuring the length to a flag placed on the feature

Right: David taking angle readings from a Dumpy Level

If you are interested to learn or practise survey skills or just enjoy the wonderful countryside there's a job for you. Do come and join us! During this **Final Phase** of the Project we intend to visit the township twice monthly – walks - see the features located during walk-over surveys, take part in a flint walk etc. and a work day. Alternate week's indoor work towards the publications will take place in Harrogate.
